Login Information

For R1 release the following applies:

Test User:

Username: irtayjdcsv_1551905442@tfbnw.net

Password: testing1234

For R2 release the following applies:

An account for our system will automatically be created once you sign in using your Facebook account. Depending on time allocated, full login may not be implemented. Instead, a user account will be generated regardless of provided credentials. A compile time variable is used to switch between using a future that contacts Facebook, or creating a dummy account. This aids in integration testing.

Readme

As per R1 specifications, the project at the moment supports at least the following: * Sign in via OAuth provider. * Stock visualization. * Calendar visualization. * Main page shell. * Current Weather.

Backend support in excess of R1 specifications exists for: * User account creation. * Authentication. * Stock purchase tracking. * Stock profit/loss calculation. * Calendar event creation, retrieval, modification, deletion. * Adaptive advertisement serving + logging + health history retrieval.

Features required by R1 that are still in an intermediate state of development: * Facebook API - creating posts and retrieving posts
